The support you need

**For
Everything
You Can't
Get in a Box!**

Dedicated to the small business and personal computer user

Every client is a valued partner, and treated as such. We're "the family doctor" for many small businesses and personal computer users; a single, consistent point of contact for all their technology concerns. In short-we solve problems, we don't pass the buck.

We provide:

- **Strategic purchasing advice**
- **Package integration services**
- **Computer and peripheral installation and trouble-shooting**
- **Internet connection setup & sharing**
- **On-site and phone support**
- **Virus recovery**
- **Data archiving & backup strategies**
- **Documentation**
- **Tutoring**

***You can buy a PC and a word processor off a shelf.
But where do you go to make everything really work?***

I.M.A. started assembling IBM-compatible PCs in the dark ages of XT's-back when getting something that truly worked was an art-so our clients would have dependable hardware. So we know the most obvious choices aren't necessarily the best ones. We present alternatives, and help clients refine their needs. Regardless of the ultimate vendors, we tie everything together.

SMALL BUSINESS NEEDS

Why a Consultant?

Project-Oriented: We're there to resolve a specific task; no overhead is wasted on anything not germane to your needs.

Perspective: Impartial, outside analysis, by those not beholden to any one vendor.

Multi-discipline: We know technology, we know business. We put pieces together to solve strategic needs.

Programming

We have been offering custom programming services since the days of DOS (actually, even earlier). We can create brand new applications or wring a few more miles out of old code. Our clients are typically small businesses, so we're well versed at maximizing value and minimizing costs. With experience spanning several industry "generations,"

we have extensive knowledge of what works and what doesn't-and how to transition.

Development technologies we've used over the years (most of which are still in use somewhere): Visual Basic/Access, Delphi, SQL, Interbase, Crystal Reports, DataFlex, Clarion, Paradox, xBASE, DataPerfect, Pascal, RPG, Assembler, COBOL.

Applications we have been involved with have run the gamut:

- Specialized accounting
- Medical patient registry database
- City government records management
- Property Management
- Prosecutor case tracking
- Customer Response systems
- Client statistics and billing systems for psychiatric programs
- Interface programs (PC to lab equipment)
- Bio-mass plant fuel inventory

For more information, estimates or on how we can make your computing life easier, don't hesitate to call or write:
